Together we can bridge the gap in computing education and digital capability

A massive digital skills shortage means that many businesses across England struggle to find people with the right capabilities to fill key roles.

This is a long-term problem requiring long-term solutions.

Alt_Shift

Together we can build a solid platform for digital skills education

To support the drive to deliver computing skills talent, we are looking to raise £1m from industry.

Give to the power of one million

Our target of £1m will enable us to reach at least 1,000,000 children.

We need your support – the greatest need is in the primary sector. If we can train around 12,000 teachers we will have impacted on 70% of England's primary schools.

Input_Return

Together we can invest in the teaching of digital skills and equip your workforce of the future

By being part of this transformation you will enjoy the benefits of contributing to your community, whilst aligning with your company mission and equipping your future workforce.

By donating
£100,000

support
450 schools

impacting
100,000 children

Discover more about us

Our vision is for every child in every school in England to have a world-leading computing education.

Our purpose is to equip and empower teachers with confidence and expertise, so that they can teach the computing curriculum in an inspiring way.

Next steps
